Freedom Phoenix Instructions

Details: The Phoenix LTX features a red receiver dome on top where tags are registered. This dome flashes red when it is tagged.

Details: The Phoenix LTX features a red receiver dome on top where tags are registered. This dome flashes red when it is tagged.

Choosing The Game:

The tagger can choose between "Solo", "Team 1" and "Team 2".

- 1) "Solo" creates a quick "LTAG" free-for-all match.
- 2) Choosing "Team 1" or "Team 2" where players are placed onto the respective team as indicated.
*Teams cannot be changed once the match begins.
- 3) Matches are started by pulling the trigger, which activates a ten second countdown.

Playing The Game:

- 1) **A strength indicator** is located to the left of the handle & shows remaining tags a player has until being out. The indicator can only visibly count ten tags. This means that if the user has more than ten tags, the indicator will remain completely lit.
- 2) **The firing trigger** is located where a typical Nerf trigger would be found, firing the tagger uses one unit of ammo. An ammo indicator is located to the right of the handle; it shows how many shots remain. The Phoenix LTX tagger can hold ten shots at a time.

Reloading The Clip:

To reload the Phoenix LTX, the user must flip a switch on the handle, this will eject the "ammo core" from the butt of the tagger. Reloading is completed by popping the "core" back into the tagger.

The Shield & Lives Setting

The shield is activated by pressing and holding the button directly in front of the trigger. It can be used by extending out the finger used for firing. When using the shield, the ammo indicator will change to show the shield being depleted. The tagger cannot be fired while the shield is being used. After using shields, there is a two second delay before the Phoenix LTX can be used again. Strength and shield times can be chosen by using the strength switch on left side of the tagger, it allows the user to choose between a "10" or "25" strength. "10" gives the user ten tags and fifteen seconds of shields, while "25" gives twenty-five tags and thirty seconds of shields.

Indoor / Outdoor Mode:

The right side of the tagger has a switch for choosing between outdoor and indoor play. Indoor Mode makes the receiver less sensitive.
